

## Help Advance Research on Music Enjoyment and Hearing Loss

Are you or someone you know interested in how hearing loss affects the enjoyment of music? A research team at Johns Hopkins University, led by Dr. Alexander Chern, is conducting a study to identify the factors that contribute to music enjoyment for people with hearing loss, with the goal of improving music enjoyment for these individuals.

### How you can participate:

- ☐ **Survey:** A short, 10-15-minute online survey about your hearing and music background
- ☐ **Interview:** Some participants will be invited to take part in a 40-minute interview to discuss what music enjoyment means to them

### We are specifically looking for:

- ☐ **Hearing aid users** (who do not use a cochlear implant)
  - ☐ **Cochlear implant users** with **poor speech and word recognition**
- OR
- ☐ **Anybody 65 years old or older**

Your participation can help improve music listening for those with hearing loss and contribute to advancing hearing aid and cochlear implant technology.

### Interested?

To learn more about the study, please fill out our pre-intake form. We will reach out with further instructions including a customized link to our intake survey.
